the intermediates described in this book include different types of phenols aldehydes carboxylic acids and ketones acetophenones w substituted acetophenones propiophenones butyrophenones benzophenones phenyl ketones and some miscellaneous ketones the preparation of heterocyclic compounds o containing s containing n containing n s containing is also described the synthesis of certain miscellaneous compounds of the type benzyl cyanides b ketoesters chalcones naphthaquinones benzoquinones stilbene and certain catalysts and reagents required for organic synthesis are also described the present book aims to make available detailed procedures for the synthesis of various intermediates which are generally required by organic chemists working in various universities industries and by the research scholars at different levels no single publication is available describing the intermediates required for organic synthesis attempt has been made to describe the best possible procedures with ample experimental details keeping in mind the maximum yield the authors and their associates have verified all the procedures described

particle characterization is an important component in product research and development manufacture and quality control of particulate materials and an important tool in the frontier of sciences such as in biotechnology and nanotechnology this book systematically describes one major branch of modern particle characterization technology the light scattering methods this is the first monograph in particle science and technology covering the principles instrumentation data interpretation applications and latest experimental development in laser diffraction optical particle counting photon correlation spectroscopy and electrophoretic light scattering in addition a summary

of all major particle sizing and other characterization methods basic statistics and sample preparation techniques used in particle characterization as well as almost 500 latest references are provided the book is a must for industrial users of light scattering techniques characterizing a variety of particulate systems and for undergraduate or graduate students who want to learn how to use light scattering to study particular materials in chemical engineering material sciences physical chemistry and other related fields

with the rapid expansion of the asia pacific economy in the last decade and the recovery after the recent crisis severe demands will be placed on energy services and the environment coping with the volatile oil prices that persist in the market introduces an additional factor into the energy supply and demand equation not just for countries in this region but also worldwide inevitably there will be implications for environmental issues too the future will see a continuing challenge to balance growth with sustainability in the economic social and environmental sectors this conference a sequel to the immensely successful apcseet conferences held in singapore and australia is aimed at meeting that challenge by addressing the pertinent issues related to sustainable energy and environmental protection it provides a forum for participants from academia industry and government agencies to interact report on research in progress and identify opportunities in the fields of sustainable energy and environmental technologies the presentations include not only technical issues such as air pollution control wastewater treatment solid waste management renewable energy and cleaner production but also education and policy issues
